Book VI L4 Shell

1

Book VI: tool-licensing. It establishes *when* continuum language is lawful. Thm. VI.9.1 (Effective Continuum Legitimacy Theorem) is cited by the GR, NS, and YM branch books. This is an L4 spine-pilot shell — the canonical Book VI is the authoritative source.

Book VI Continuum Bridge — L4 Generated Shell

Book VI is the tool-licensing book. It establishes when continuum language is lawful. The Effective Continuum Legitimacy Theorem (Thm. VI.9.1 = `thm:VI.governing [C]`) is cited by GR, NS, and YM branch books. The Bridge Schema Theorem (`thm:VI.continuum-bridge-schema [U]`) is unconditional: both scoped certificate and separately proved bridge are always required.

Unconditional Results [U]

Machine ID	St.	Canonical label
<code>thm:VI.continuum-bridge-schema[U]</code>		Continuum Bridge Schema Theorem [U] — both scoped cert
<code>thm:VI.no-smuggling</code>	[U]	Continuum No-Smuggling Theorem [U]
<code>thm:VI.T-partial-stability</code>	[U]	Perturbation Stability of T _{partial} [U]

Conditional Results [C] — Within a Certified Interface Regime

Machine ID	St.	Canonical label
<code>thm:VI.differential-legitimacy[C]</code>		Differential Notation Legitimacy [C] — within a certifi
<code>thm:VI.integral-legitimacy</code>	[C]	Integral Notation Legitimacy [C] — within a certified i
<code>thm:VI.governing</code>	[C]	Effective Continuum Legitimacy Theorem [C] = Thm. VI.9.
<code>cor:VI.joint-legitimacy</code>	[C]	Joint Legitimacy of Full Calculus [C]
<code>thm:VI.NS-4B-sobolev</code>	[C]	NS-4B Sobolev Embedding Surrogate [C] — conditional on

Thm. VI.9.1 Citation Closure

`thm:VI.governing` (= Thm. VI.9.1, Effective Continuum Legitimacy Theorem) is cited by: `GR`, `NS`, `YM`. With Book VI machine records, the `GR` branch book import (`thm:VI.9.1` = Thm. VI.9.1) now resolves to a machine record with a canonical cross-reference annotation and a body text stub.
