CRYST Branch Successor Pilot

1

CRYST Branch Successor Pilot

This generated packet is an L2 branch-pilot shell. It is not a supersession of the canonical CRYST Branch Book. It tests the zero-frontier case: a branch may be closed on its declared gauge-response regime without claiming closure over downstream matter-rich spectroscopy.

Pilot posture

Computed CRYST posture: **conditional-cert-close**. The phase problem remains active and is intentionally preserved in this pilot.

Table 1: CRYST successor-pilot claim catalog

ID	Kind	Declared	Computed	Scope
thm:CRYST.END	theorem	C	C	branch
ob:CRYST.phase-problem	obligation	O	O	branch
status:CRYST	status_note	conditional-cert-close	conditional-cert-close	branch

Generated claim shells

Theorem-like claim: CRYST Endpoint Status Proposition

Machine ID. thm:CRYST.END

Declared status. C **Computed status.** C

Scope. regime=diffraction-periodicity-symmetry; domain=CRYST-branch; certificate_scope=branch; promotion_ceiling=C

CRYST reaches diffraction-periodicity-symmetry closure at conditional branch force.

Dependencies. thm:VII.6.4

Obligation: Crystallographic Phase Problem

Machine ID. ob:CRYST.phase-problem

Declared status. O **Computed status.** O

Scope. regime=diffraction-periodicity-symmetry; domain=CRYST-branch; certificate_scope=branch

The phase problem remains the principal crystallographic frontier.

Dependencies. thm:CRYST.END

Status note: CRYST Branch Posture

Machine ID. status:CRYST

Declared status. conditional-cert-close **Computed status.** conditional-cert-close

Scope. regime=diffraction-periodicity-symmetry; domain=CRYST-branch; certificate_scope=branch
CRYST branch posture rendered from current endpoint force and remaining phase frontier.

Dependencies. thm:CRYST.END, ob:CRYST.phase-problem
