LING Branch Successor Pilot

1

LING Branch Successor Pilot

This generated packet is an L2 branch-pilot shell. It is not a supersession of the canonical LING Branch Book. It tests the zero-frontier case: the branch preserves contrast, recursion, and context-response closure without claiming full reference recovery.

Pilot posture

Computed LING posture: **conditional-cert-close**. The REF-INVIS/RECOV frontier remains active and is intentionally preserved in this pilot.

Table 1: LING successor-pilot claim catalog

ID	Kind	Declared	Computed	Scope
thm:LING.END	theorem	C	C	branch
ob:LING.REF-INVIS-RECOV	obligation	O	O	branch
status:LING	status_note	conditional- cert-close	conditional- cert-close	branch

Generated claim shells

Theorem-like claim: LING Endpoint Status Proposition

Machine ID. thm:LING.END

Declared status. C **Computed status.** C

Scope. regime=contrast-compositional-context-response; domain=LING-branch; certificate_scope=branch; promotion_ceiling=C

LING reaches contrast, compositional, and context-response closure at conditional branch force.

Dependencies. thm:VII.6.4

Obligation: Reference Invisibility / Recovery Frontier

Machine ID. ob:LING.REF-INVIS-RECOV

Declared status. O **Computed status.** O

Scope. regime=contrast-compositional-context-response; domain=LING-branch; certificate_scope=branch

Reference invisibility / recovery remains the named frontier.

Dependencies. thm:LING.END

Status note: LING Branch Posture

Machine ID. status:LING

Declared status. conditional-cert-close **Computed status.** conditional-cert-close

Scope. regime=contrast-compositional-context-response; domain=LING-branch; certificate_scope=branch
LING branch posture rendered from current endpoint force and frontier package.

Dependencies. thm:LING.END, ob:LING.REF-INVIS-RECOV
