SPEC Branch Successor Pilot

This generated packet is an L2 branch-pilot shell. It is not a supersession of the canonical SPEC Branch Book. It tests the zero-frontier case: a branch may be closed on its declared gauge-response regime without claiming closure over downstream matter-rich spectroscopy.

Pilot posture

Computed SPEC posture: **cert-close**. No active SPEC-local frontier is expected in the declared gauge-response regime.

Table 1: SPEC successor-pilot claim catalog

ID	Kind	Declared	Computed	Scope
thm:SPEC.10.1	theorem	U	U	branch
status:SPEC	status_note	cert-close	cert-close	branch

Generated claim shells

Theorem-like claim: SPEC Branch Status Proposition

Machine ID. thm:SPEC.10.1

Declared status. U **Computed status.** U

Scope. regime=gauge-response-spectroscopy; domain=SPEC-branch; certificate_scope=branch

On the gauge-response spectroscopy regime, the SPEC branch reaches its declared closure endpoint.

Dependencies. thm:VII.6.4

Discharge edges. status:SPEC

Status note: SPEC Branch Posture

Machine ID. status:SPEC

Declared status. cert-close **Computed status.** cert-close

Scope. regime=gauge-response-spectroscopy; domain=SPEC-branch; certificate_scope=branch

Current branch posture rendered from the reconciled claim graph.

Dependencies. thm:SPEC.10.1
